

Petition for a right filter light at the Junction of Station Road and Pinner Road, North Harrow

Car drivers who wish to turn right out of Station Road into Pinner Road do not have the benefit of a right filter light even though they have to cross three lanes of traffic and the topography of the junction is such that the visibility of oncoming traffic is poor. There is already a filter light for traffic turning right out of Pinner Road towards North Harrow station although there are only two lanes of oncoming traffic. We request Harrow Council to install right filter lights on all the signals at this junction.
