

Planning Application for a telephone mast at the junction of Pinner Road/ George V Ave, Planning No: P/0066/12

13.8m HIGH

We the undersigned object to the application on the grounds that it is close to a major High school, it is opposite the bedroom windows of local houses. It as was suggested by government that they should be sited with other masts. E.g. Co located with masts on the roof of Pinner firestation, better clearance of houses, above top of school and giving better radiation of signal for communication, also reducing the amount of street furniture on a very busy junction with both high car volume and lots of school students passing by it at regular intervals.
